FOREWORD

IN the year 1836, the Queen's Run Fire Brick Company had its beginnings, when the mining of fire clay and the manufacture of fire brick was undertaken by a few men, at the little mining settlement of Queen's Run three miles west of Lock Haven, Pa. The beginning was small but the little plant soon gained a desirable reputation for the quality of its product.

In the same year of its organization, the Company furnished the material for the first hot blast anthracite furnace in the country, to superintend the building of which Benj. Perry came to the United States from England.

In 1887, the Company works were moved from Queen's Run, the mine location, and established at Lock Haven. On June 23rd, 1890, the Company was incorporated under the name of the Queen's Run Fire Brick Company. In recent years additional operations were acquired, one at North Bend, Pa., known as the North Bend Plant and one at Drury's Run, Pa., known as the West Branch Plant. In 1920, an amalgamation brought these two plants, together with the one at Lock Haven, under one organization, now known as the Queen's Run Refractories Company, Inc.

While the age of an organization is not necessarily indicative of its position in the field, a long continued existence nevertheless argues for it a certain position of stability and responsibility. Our experience of many

years in supplying brick of every type for every type of furnace has a definite value to our customers.

We are pioneers in the manufacture of blast furnace linings in America and have maintained this leadership for eighty-seven years, under every imaginable condition in all types of furnaces, with all classes of ore and fuel.

Modern blast furnace practice makes it most essential that only the highest grade fire brick be used. Our clays are peculiarly well adapted to this work and our long experience in compounding the same have made it possible for us to produce a lining capable of resisting not only the heat and mechanical friction encountered, but the chemical action as well. Our blast furnace brick are now branded, "Queen's Run Hearth and Bosh," "Inwall," and "Top," in order to insure that the brick will be placed in that part of the furnace for which they were made.

We also make a most satisfactory blast furnace stove brick. Although, in service, stove brick are not subjected to the intense heat of the melting zone of the blast furnace, the weight carried, their capacity to absorb heat and readily to radiate the same and at the same time to withstand the disintegrating tendency of hot gasses constantly varying in temperature, makes the manufacture of stove brick second only to that of blast furnace linings.

In addition to our regular brands we manufacture a great variety of special shapes. The satisfaction we have been able to give with this class of work has been marked.

We have three separate mining operations, producing both flint and plastic clay and, also, three brick-making units, thus obviating any possibility of our production being wholly stopped or even seriously curtailed.

GUARANTEES

No performance guarantee of any kind is made in the sale of refractories.

In the execution of orders for our products we undertake to furnish material which in our judgment is best suited for the purpose for which it is purchased.

Having thus met the full sense of the obligation to the industries we serve and having no control over the use of our product after same is placed in service, we feel that there is a similar obligation on the part of the purchaser to seek and select the material which will give him the best results and to exercise extreme care and discretion in the use of the material which he receives.

DEVIATIONS

Variations (plus or minus) of 2% from specified dimensions, covering both shrinkage and warpage, on dimensions of 4" or over.

On dimensions under 4", the allowed variations covering shrinkage and warpage will be 3%.

GENERAL INFORMATION ABOUT FIRE BRICK

Moisture, especially in cold weather, will greatly injure any fire brick. Exposure to weather causes fire brick to rapidly deteriorate and the use of fire brick which have been thus exposed is the cause of many failures.

To obtain the best results from fire-brickwork, observe the following precautions :

Use good fire clay equal in refractoriness to the brick itself, mixing with water to thin paste. Dip brick and rub to make a brick-to-brick joint.

Warm slowly to expel moisture.

From 400 to 600 pounds of fire clay are enough to lay one thousand brick. Finely ground fire clay should be used for laying up fire clay brick.

For estimating on fire-brickwork, use the following figures :

- 1 square foot 4 ½-inch wall requires 7 nine-inch straight brick.
- 1 square foot 9-inch wall requires 14 brick.
- 1 square foot 13 ½-inch wall requires 21 brick.
- 1 cubic foot of fire-brickwork requires 17 brick.
- 1 cubic foot of fire-brickwork weighs 125 to 140 pounds.
- 1,000 brick (closely stacked) occupy 56 cubic feet.
- 1,000 brick (loosely stacked) occupy 72 cubic feet.

TEMPERATURES

Below is given the fusion points of iron, steel and other metals, and some refractory oxides, according to the latest investigations.

(The figures given below, with exception of brass, cast iron, steel, wrought iron, are taken from a 1918 publication of the Bureau of Standards.)

(The figures for Kaolin, Alumina, and Magnesia are the work of Sosman, of the Geographical Laboratory, Washington.)

	Centigrade Degrees	Fahrenheit Degrees
Tin.....	231.9	449.4
Lead	327.4	621.3
Zinc.....	419.4	782.9
Antimony.....	630.0	986.0
Aluminum.....	658.7	1217.7
Silver	960.5	1760.9
Brass	1021	1870
Gold	1063.0	1945.5
Copper	1083.0	1981.4
Cast Iron, white	1135	2075
Cast Iron, gray.....	1222	2230
Steel	1300	2372
Iron, wrought.....	1500	2732
Nickel.....	1452	2646
Platinum	1755	3191
Silica.....	1750	3182
Kaolin.....	1755	3191
Alumina.....	2050	3722
Magnesia.....	2800	5072

TEMPERATURES—CONTINUED

	Centigrade Degrees	Fahrenheit Degrees
Glass Furnace, between the pots.	1375	2507
In the pots, refining.....	1310	2390
In the pots, working.....	1045	1913
Tanks melted for casting.....	1310	2390
Annealing Glassware..... {	444	800
	to 555	to 1000
Siemens Crucible Steel {	1460	2660
Furnace varies from {	to 1590	to 2894
BESSEMER PROCESS		
Running the slag	1580	2876
Running steel into ladle.....	1640	2984

Zero in Centigrade is the freezing point of water.

To change degrees Centigrade to Fahrenheit, multiply by 9, divide by 5 and add 32.

To change degrees Fahrenheit to Centigrade, subtract 32, divide by 9 and multiply by 5.

WEIGHTS OF VARIOUS MATERIALS

Material	Average Per Cu. Ft. Pounds
BRICK	
Common red	100
Fire clay	125 to 140
Silica	105
Chrome	175
Magnesia as brick or fused in furnace	170
CEMENT	
Portland	78
Hydraulic	60
FINE GROUND CLAYS, SILICA CEMENT, ETC.	
Fire clay	85
Silica cement	75
Magnesia cement	127
Chrome cement	135
Grain magnesite (as shipped)	112
COAL AND COKE	
Anthracite	60
Bituminous	49
Charcoal	18 5
Coke	26 3
CONCRETE	
Cement, fine	137
Rubble, coarse	119
EARTH	
Loam, dry, loose	76
Loam, packed	95
Loam, soft, loose mud	108
Loam, dense mud	125
GLASS	
Common window	157
Plate	172
Flint	192
Floor or skylight	158
GRAIN	
Corn	45
Oats	24
Wheat	48
LIME	
Quick, loose lumps	53
Quick, fine	75
Stone, large rocks	168
Stone, irregular lumps	96
MASONRY	
Granite or limestone	165
Mortar, rubble	154
Dry	138
Sandstone, dressed	144
METALS	
Aluminum	166
Brass, cast	524
Bronze	534
Copper, cast	537
Copper, rolled or wire	555
Iron, cast	450
Iron, wrought	482

WEIGHTS OF VARIOUS MATERIALS CONTINUED

Material	Average Per Cu. Ft. Pounds
METALS—Continued	
Lead, cast	708
Lead, rolled	711
Steel, cast	490
Steel, rolled	495
Tin, cast	459
Zinc, cast	438
OILS	
Engine	55
Crude	48
Petroleum	55
Gasoline	43
ROCK	
Chalk	145
Granite	165
Gypsum	143
Sandstone	144
Pumice stone	57
Quartz	165
Salt, coarse	45
Salt, fine	49
Shales	162
Slate, American	175
SAND	
Dry and loose	100
Dry and packed	110
Wet and packed	130
Gravel packed	118
WATER	
Water as ice	58.7
Water at 32 degrees Fahrenheit	62.4
Water at 212 degrees Fahrenheit	59.6
WOODS, DRY	
Apple	48
Beech	43
Birch	45
Cedar, American	35
Chestnut	41
Ebony	76
Elm	35
Hemlock	25
Hickory	53
Ironwood	114
Mahogany	35 to 53
Maple	49
Oak, live	59
Oak, white	50
Pine, white	25
Pine, yellow northern	34
Pine, yellow southern	45
Spruce	25
Walnut	35

METRIC WEIGHTS AND MEASURES

METRIC WEIGHTS

Milligram (.001 gram)	- - - - -	0.0154	grain
Centigram (.01 gram)	- - - - -	0.1543	grain
Decigram (.1 gram)	- - - - -	1.5432	grains
Gram	- - - - -	15.4324	grains
Decagram (10 grams)	- - - - -	0.3527	oz. avoird.
Hectogram (100 grams)	- - - - -	3.5274	oz. avoird.
Kilogram (1000 grams)	- - - - -	2.2046	lbs. avoird.
Myriagram (10,000 grams)	- - - - -	22.02462	lbs. avoird.
Quintal (100 kilos)	- - - - -	220.4622	lbs. avoird.
Millier or Ton (1000 kilos)	- - - - -	2,204.6228	lbs. avoird.

METRIC DRY MEASURES

Milliliter (.001 liter)	- - - - -	0.061	cu. in.
Centiliter (.01 liter)	- - - - -	0.6103	cu. in.
Deciliter (.1 liter)	- - - - -	6.1027	cu. in.
Liter	- - - - -	0.9081	quart
Decaliter (10 liters)	- - - - -	9.0808	quarts
Hectoliter (100 liters)	- - - - -	2.8377	bushels
Kiloliter (1000 liters)	- - - - -	1.3079	cu. yds.

METRIC LIQUID MEASURES

Milliliter (.001 liter)	- - - - -	0.0338	fluid oz.
Centiliter (.01 liter)	- - - - -	0.3381	fluid oz.
Deciliter (.1 liter)	- - - - -	0.8452	gill
Liter	- - - - -	1.0567	quarts
Decaliter (10 liters)	- - - - -	2.6417	gallons
Hectoliter (100 liters)	- - - - -	26.4170	gallons
Kiloliter (1000 liters)	- - - - -	264.1705	gallons

Metric Weights and Measures—Continued.

METRIC MEASURES OF LENGTH

Millimeter (.001 meter)	- - - - -	0.03937 inch
Centimeter (.01 meter)	- - - - -	0.3937 inch
Decimeter (.1 meter)	- - - - -	3.937 inches
Meter	- - - - -	39.37 inches
Decameter (10 meters)	- - - - -	32.8083 feet
Hectometer (100 meters)	- - - - -	328.083 feet
Kilometer (1000 meters)	- - - - -	3280.83 feet
Kilometer (1000 meters)	- - - - -	0.62137 mile
Myriameter (10,000 meters)	- - - - -	6.2137 miles

METRIC SURFACE MEASURES

Centare (1 sq. meter)	- - - - -	1,550 sq. in.
Are (100 sq. meters)	- - - - -	119.6 sq. yds.
Hectare (10,000 sq. meters)	- - - - -	2.471 acres
